

Project Design Phase Proposed Solution Template			
Date	31 August 2026	Team ID / Scope	x_1959081_emp_issue
Project Name	Employee Raise Issue Integration	Maximum Marks	2 Marks

PROPOSED SOLUTION OVERVIEW

The project team has structured the proposed ServiceNow platform solution to address workplace issue logging inefficiencies, replace unstructured email workflows, and establish automated tracking under application scope `x_1959081_emp_issue`.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Enterprise employees face significant delays and data loss when raising workplace issues via informal email chains or phone calls. Support teams receive incomplete information lacking mandatory details, leading to manual triage bottlenecks, untracked SLAs, and zero real-time status visibility for end-users.
2	Idea / Solution description	A centralized Employee Raise Issue Service Portal built on ServiceNow under Scoped Application <code>x_1959081_emp_issue</code> . Key features include: • Record Producer: Exposes an intuitive form for quick issue submission. • Dynamic UI Policies: Enforces a Read-Only Ticket Number and dynamic parent-child category/sub-category dropdowns. • Custom Service Portal Widgets: Left Widget for guidance & submission; Right Widget for live status tracking without backend admin permissions.
3	Novelty / Uniqueness	• Scoped Application Isolation: Full component encapsulation ensuring deployment safety and zero collision with global platform tables. • No-Code / Low-Code Accessibility: Non-technical users submit structured requests without backend access. • Automated Data Transformation: Instantly converts front-end Record Producer inputs into backend relational table records (<code>u_employee_raise_issue</code>) with zero manual intervention.

PROPOSED SOLUTION BREAKDOWN (CONTINUED)

S.No.	Parameter	Description
4	Social Impact / Customer Satisfaction	• Employee Empowerment: Shifts user emotions from frustration (lost emails) to confidence through transparent status visibility. • Operational Efficiency: Eliminates back-and-forth communication, saving employee and support desk time. • Enhanced Accountability: Every issue is assigned a unique, uneditable tracking ticket number, ensuring clear SLA tracking and prompt fulfillment.
5	Business Model (Revenue Model)	• Enterprise SaaS Model: Subscription-based ServiceNow platform licensing (Per User / Per Month or Per ITIL Agent Seat). • Cost Avoidance & Productivity Gain: Reduces administrative overhead, speeds up resolution times, and maximizes productive working hours for enterprise staff. • Internal Service Management ROI: Lowers support desk operating costs through automated ticket creation and self-service status checks.
6	Scalability of the Solution	• Multi-Department Expansion: Architecture easily scales beyond facilities/HR to support IT, Finance, and Legal workplace issues. • ServiceNow Cloud Infrastructure: Backed by ServiceNow Advanced High Availability (AHA) multi-node cloud database infrastructure capable of handling growing ticket volumes. • Modular Architecture: Additional UI policies, choice dropdowns, and automated approval workflows can be integrated without modifying core codebase.
