

PROBLEM-SOLUTION FIT CANVAS 2.0

Project: Employee Raise Issue – Record Producer & Service Portal Integration

Application Scope: `x_1959081_emp_issue`
Target Customer Segment: Enterprise Employees & Support Desk Agents

1. CUSTOMER SEGMENT(S)

Who is your customer? Define target group profiles.

Primary Users: Non-technical enterprise employees logging workplace/facility issues.

Secondary Users: Support desk team and HR specialists managing ticket fulfillment.

Key Traits: Expect quick digital self-service, clear status tracking, and minimal form friction.

2. JOBS-TO-BE-DONE / PROBLEMS

Which problems or jobs-to-be-done do you address?

Core Job: Submit workplace issues officially without sending unstructured, lost emails.

Data Job: Ensure required details are captured up front through structured drop-down fields.

Tracking Job: Check real-time ticket status dynamically without emailing support agents.

3. TRIGGERS

What triggers customers to act?

Workplace Incident: Experiencing workstation hardware failure, facility issues, or policy queries.

Need for Accountability: Requirement for an official ticket tracking reference number.

Efficiency Trigger: Wanting fast resolution without manual email thread delays.

4. EMOTIONS: BEFORE / AFTER

How do customers feel before facing the problem and afterwards?

Before (Problem State): Frustrated and uncertain due to unacknowledged emails and zero visibility on ticket progress.

After (Solution State): Confirmed, empowered, and confident with automated ticket generation and live status dashboards.

5. AVAILABLE SOLUTIONS

What solutions are available? What pros & cons do they have?

Informal Emails: Familiar, but results in missing fields, lost threads, and no status tracking.

Direct Calls / In-Person: Immediate, but lacks an audit trail and disrupts agent workflows.

Backend Admin Forms: Structured, but overly complex and restricted for non-admin staff.

6. CUSTOMER CONSTRAINTS

What limits choices or prevents taking action?

Access Restrictions: General employees lack backend platform administrative access.

Time Limitation: Users need to submit requests in under 60 seconds.

Form Fatigue: Reluctance to complete long, irrelevant form fields.

7. BEHAVIOUR

What does your customer do to address the problem?

Direct Action: Opens the Service Portal directly from desktop or mobile web browser.

Form Completion: Selects issue categories with dynamic parent-child sub-category filtering.

Progress Check: Monitors personal ticket updates via the Portal Right Widget dashboard.

8. CHANNELS OF BEHAVIOUR

Actions taken online (#8.1) and offline (#8.2).

8.1 Online Channels: Employee Service Portal URL, Record Producer Submission Form, Left Guidance Widget, Right Status Widget.

8.2 Offline Channels: New employee onboarding guides, internal IT helpdesk poster campaigns.

9. PROBLEM ROOT CAUSE

What is the real reason that this problem exists?

Entry Point Deficit: Absence of a centralized, user-friendly portal interface for non-admin staff.

Lack of Validation: Email intake lacks mandatory field enforcement at submission.

Manual Bottlenecks: Manual ticket logging creates agent delays and untracked SLAs.

10. YOUR SOLUTION (EMPLOYEE RAISE ISSUE SERVICE PORTAL)

How your project solves the problem within customer limitations and matches customer behavior.

Scoped Application Architecture: Engineered under application scope `x_1959081_emp_issue` to isolate configurations and ensure deployment safety.

Record Producer & Dynamic UI Policies: Exposes a simplified end-user form, protects ticket integrity with a Read-Only Number field, and enforces dynamic field dependencies.

Service Portal & Custom Widgets: Integrates a Left Widget for request creation and guidance, alongside a Right Widget for real-time ticket status tracking without backend permissions.
