

IDEATION PHASE

DEFINE THE PROBLEM STATEMENTS

Date	16 August 2026	Team ID	Individual Project
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration	Maximum Marks	2 Marks

Customer Problem Statement Template

The customer problem statement is written from the employee's point of view to identify the employee, the goal they are trying to achieve, the barriers they face, the underlying reason for those barriers, and the resulting feeling.

Problem Statement (PS)	I am (Employee)	I'm trying to	But	Because	Which makes me feel
PS-1	a dedicated software developer	secure a merit-based salary review	the evaluation process is opaque	the company uses general budget caps instead of performance-specific data	Demoralized and anxious
PS-2					

Problem Statement (PS)	I am (Employee)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee who needs to raise a salary, payroll, workplace, access, infrastructure, or HR-related issue.	submit my issue through one standardized and reliable Service Portal channel.	the existing process may depend on emails or informal communication and may lack clear structure and status visibility.	requests can be captured inconsistently, routed manually, and stored without a unified request experience.	uncertain about whether my issue was recorded correctly, where it is routed, and when it will be resolved.
PS-2	an employee who wants to provide complete and accurate issue information.	select the correct issue category and subcategory and provide the required details.	unclear or irrelevant fields can make the submission process confusing.	without dynamic UI Policies and field dependency, users may submit incomplete or inaccurate information.	frustrated and concerned that my request may be delayed or misunderstood.

EMPLOYEE POINT-OF-VIEW BREAKDOWN

I am	Describe employee with 3-4 key characteristics - <i>who are they?</i>	A high-performing software engineer responsible for revenue-critical product delivery, with five years of consistent tenure.
I'm trying to	List their outcome or "job" the employee cares about - <i>what are trying to achieve?</i>	Secure a base salary increase that reflects my significant performance contributions, unique domain expertise, and current market benchmarks.
but	Describe what problems or barriers stand in the way – <i>what bothers them most?</i>	Experience extensive bureaucratic delays and an overall lack of transparency from HR into the current salary bands and evaluation process.
because	Enter the "root cause" of why the problem or barrier exists – <i>what needs to be solved?</i>	Internal compensation structures are based on outdated data (over 18 months old) and do not account for critical talent retention or exceptional performance in dynamic roles.
which makes me feel	Describe the emotions from the employee's point of view – <i>how does it impact them emotionally?</i>	Undervalued, demoralized, and increasingly less motivated, with growing frustration about perceived career stagnation.

Perspective	Employee Raise Issue – Project-Specific Interpretation
I am	An employee who needs a simple, centralized way to raise salary/raise concerns, payroll discrepancies, workplace issues, access problems, infrastructure requests, or HR policy clarifications.
I'm trying to	Submit a complete and accurate request through the Service Portal so the issue is captured as a structured backend record.
But	Existing email or informal channels can be fragmented, inconsistent, and difficult to track.
Because	There is no single guided submission flow with standardized fields, category/subcategory dependency, and automated record creation.
Which makes me feel	Uncertain about submission, frustrated by manual follow-up, and concerned about delays or missing information.

Core Problem Statement

How might we enable employees to raise salary, payroll, workplace, access, infrastructure, and HR-related issues through a single standardized Service Portal interface that dynamically validates inputs, creates structured backend records through a Record Producer, and improves visibility throughout the request lifecycle?

Solution Direction

The proposed solution uses a scoped ServiceNow application, custom issue table, UI Policies and dependent fields, a Record Producer, Service Portal, and custom widgets to create a centralized and structured employee self-service experience.
