

Customer Journey Map: Employee Raise Issue Service Portal

ServiceNow Solution Architecture — End-to-End User Experience Mapping

Scope: x_1959081_emp_issue
Target User: Workplace Employee & Support Team

	PHASE 1 Entice <i>How does an employee notice workplace issues?</i>	PHASE 2 Enter <i>How do they access the Service Portal?</i>	PHASE 3 Engage <i>How do they fill out the Record Producer form?</i>	PHASE 4 Exit <i>What happens upon form submission?</i>	PHASE 5 Extend <i>How is the issue tracked to resolution?</i>
Steps <i>What does the user typically experience?</i>	Encounters workplace or equipment discrepancy. Considers emailing HR/Facilities directly via informal channel.	Opens web browser and navigates to Employee Service Portal. Views homepage dashboard with custom Left and Right widgets.	Selects "Raise Workplace Issue" Record Producer form. Selects Issue Category and dependent Sub-Category choices.	Reviews auto-populated fields & submits form. Receives instant confirmation screen with generated Ticket Number.	Monitors ticket updates via Right Widget dashboard. Receives issue resolution notification from support team.
Interactions <i>Touchpoints, people, and tools used.</i>	PEOPLE Employee, Peer Colleagues THINGS Workplace Desk, Workstation, Email Client	PLACES Employee Service Portal URL THINGS Left Portal Widget (Quick Actions & Guidance)	THINGS Record Producer Form, Dependent Category Dropdowns RULES UI Policies dynamically triggering mandatory fields	THINGS Automated Table Record (x_1959081_emp_issue) PEOPLE Support Desk Team (Backend)	THINGS Right Portal Widget (User Status Tracking) PEOPLE Issue Assignee / HR Specialist
Goals & Motivations <i>Primary user drive at each step.</i>	"Help me log my issue quickly without getting lost in email threads."	"Help me find an easy, intuitive portal so I don't need backend access."	"Help me provide exact details without filling out unnecessary fields."	"Help me confirm that my request was submitted successfully."	"Help me track my ticket progress transparently until resolution."
Positive Moments <i>What feels smooth and productive?</i>	Awareness of a centralized, dedicated portal for support requests.	Clean Left & Right Widget layout makes navigation effortless.	Dynamic field dependencies hide irrelevant options, reducing form clutter.	Read-only Ticket Number prevents accidental editing and ensures tracking.	Real-time status visibility on portal eliminates follow-up emails.
Negative Moments <i>Frustrations or bottlenecks.</i>	Prior frustration with lost emails and lack of response tracking.	Uncertainty on where to click if landing on general backend admin UI.	Confusion if required fields are not clearly marked or dynamic.	Fear that request data might be lost upon form submission.	Lack of updates if support teams take long to assign ticket.
Areas of Opportunity <i>Ideas for workflow enhancement.</i>	Promote Portal URL across onboarding guides to eliminate email usage.	Add search bar widget to suggest KB articles before submitting tickets.	Auto-populate employee location & department into Record Producer.	Trigger automated email/SMS receipt with direct portal link.	Add live chat/Virtual Agent widget for instant status inquiries.
