

Project Design Phase-II Solution Requirements (Functional & Non-functional)			
Date	31 August 2026	Team ID / Scope	x_1959081_emp_issue
Project Name	Employee Raise Issue Integration	Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Scoped Application Architecture	- Application isolation within scope x_1959081_emp_issue. - Encapsulation of tables, scripts, widgets, and access rights.
FR-2	Custom Data Model & Table Management	- Custom table creation for structured issue record storage. - Configuration of choice lists, references (e.g., sys_user), and string fields.
FR-3	Dynamic UI Policies & Rules	- Read-only protection for auto-generated Ticket Number fields. - Dynamic conditional visibility and mandatory field enforcement based on category selection. - Parent-child choice dependencies between primary and sub-category fields.
FR-4	Record Producer Integration	- Simplified front-end submission form for employees. - Automatic backend mapping from form inputs directly into custom table records.
FR-5	Service Portal & Custom Widgets	- Dedicated portal interface separating end-users from administration screens. - Custom Left Widget for issue guidance and request creation. - Custom Right Widget for live employee status and ticket progress monitoring.
FR-6	Testing & Validation Workflow	- End-to-end verification from portal entry to record generation. - UI policy logic, dependency filtering, and ticket protection validation.

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Provides an intuitive Service Portal UI with Left/Right widgets and dynamic field dependencies to reduce form complexity for end-users.
NFR-2	Security	Scoped Application isolation (x_1959081_emp_issue) restricts unauthorized access, and read-only UI policies prevent ticket identifier tampering.
NFR-3	Reliability	Automated Record Producer logic eliminates incomplete manual email requests and ensures 100% structured data capture in custom tables.
NFR-4	Performance	Optimized portal widgets and lightweight client-side UI policies ensure fast form rendering and instant submission processing.

NFR No.	Non-Functional Requirement	Description
NFR-5	Availability	Service Portal allows 24/7 self-service employee issue reporting without needing direct backend admin availability.
NFR-6	Scalability	ServiceNow platform architecture supports increasing ticket volumes, additional choice options, and future workflow expansions seamlessly.
